• DIRECT REGISTERING GAIT ANALYSIS ON A QUADRUPED ROBOT - 2022

No.	Specification	Description
1	Overall Dimension	
	- length	548.34 mm
	- width	392.36 mm
	- height	258.57 mm
2	Weight	7.2 Kg
3	Payload Capacity	0.5 Kg
4	Degree of freedom	12
5	Servo	Custom servo with mj5208 brushless motor
6	Control System	On board processor , fdcansub , PC controller
7	Power Supply	18V , 2Ah Li - Ion Battery , mbots power dist r4.3b
8	Micro Controller	Moteus r4.8 controller
9	Built - in OS	Linux , Windows
10	Connectivity	Usb , Wi-Fi

What?

- Design and fabrication of **quadruped robot** using in-house manufactured actuators for reduced cost of the project.
- Develop gait algorithm for efficient robot's trajectory planning.
- Funded by **Dassault Systèmes**
- Final Year Undergraduate Project.

How?

- Used **SolidWorks** and **Shapr3D** for designing modular actuator and robot body.
- Employed FDM 3D Printing and Metal Machining for fabrication.
- Developed and analyzed the **Direct Registering Gait** algorithm using **PyBullet**.

Results

- Successfully designed and tested the 12 DoF Quadruped Robot.
- Custom actuators decreased the cost by **60 percent**.
- Implementation of Direct Registering Gait reduced trajectory planning processing time by **50 percent**.
- Modular approach in both design and algorithm development allowed for subsequent students to build upon the platform.

• ORANGE WOOD ROBOT (OWR) V6.5 - ORANGEWOOD LABS - 2023

What?

- Design , simulation and fabrication of an industrial robotic arm.
- Weight : 25kg
- Payload capacity : 5kg
- Reach : 850mm

How?

- **SolidWorks** for designing.
- **ANSYS** for FEM Stress and Strain Analysis.
- Joint torque calculation for **CE certification**.
- **URDF development** and optimization for ROS.
- CAD drawing drafting and **GD&T** implementation.
- Vendor reach-outs , procurement and Q&C for CNC parts , plastic housing and accessories.

Results

- Successfully design , testing and **30** batch run production of OWR V6.5.
- 27 of the robots are either deployed or in trial runs.

• CONTROL BOX : ORANGEWOOD LABS - 2023

Control Box v4.0 (left) vs previous versions

What?

- Design and fabrication of control box for industrial robotic arm.
- Objective :
 1. Size reduction.
 2. Weight reduction.
 3. Convenient one-handed carrying

How?

- **Sheet metal** feature in **SolidWorks** for designing.
- CAD drawing drafting and implementation of **GD&T**.
- Sheet metal vendors reach-outs and procurement.

Results

- **25 percent** size reduction.
- **30 percent** weight reduction.
- Single handed portability.

• HACKATHON : INGENIUS - 2022

What?

- INGENIUS : Organised by ASME , SAE , RoboYantri & Shilpkulam.
- National level 48 Hrs hackathon.
- Objective : “ Fire broke out in a multi-storey building, Fire-Fighters have no chance for Entry, People are stuck inside crying for help ” , Design a rescue system for rescuing the people.

How?

- Designed **RAFES** : Robot Assisted Fire Escape System using **SolidWorks**.
- Vision System for easier human recognition through smoke.
- Water hose for fire suppression.
- Chute for easier exigency.

Results

- Awarded First Prize

• HACKATHON : HACKTHECRISIS - 2022

What?

- HackTheCrisis : Feeding India Hackathon.
- **National level hackathon.**
- Ideate , develop and present solution targeted towards 17 UN SDGs.

How?

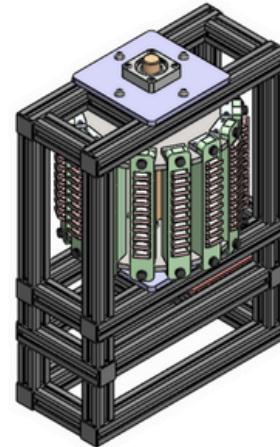

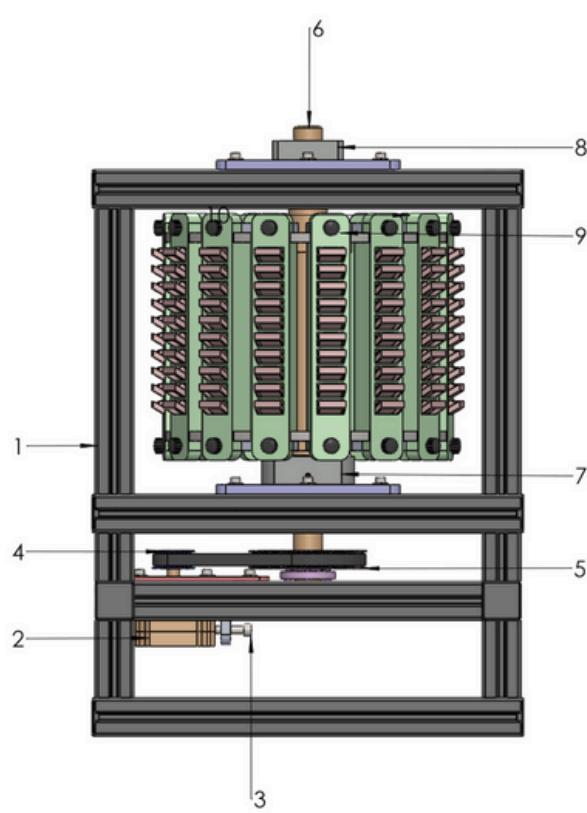

- Smart Bin that incentivizes people to use the bin in return for rewards points.
- Designed mechanism for waste identification and bin sorting.
- Used **Fusion 360** for modelling and animation.

Results

- **Awarded Second Prize**

CAROUSEL DRIVING SYSTEM

CAROUSEL AND DRIVING SYSTEM - AVIRAL SUNDLI

S.NO.	DESCRIPTION
1	ALUMINIUM EXTRUSION FOR BASE FRAMEWORK
2	NEMA 34 STEPPER MOTOR
3	ADJUSTABLE SCREW FOR BELT TENSIONING
4	24 T - XL PROFILE TIMING PULLEY
5	72 T - XL PROFILE KEYLESS TIMING PULLEY
6	CUSTOM SS304 TURNED SHAFT
7	BEARING WITH HOUSING - THRUST + RADIAL
8	BEARING WITH HOUSING - RADIAL
9	LASER CUTTED ALUMINIUM SHEET CAROUSEL BODY
10	INJECTION MOLDED STACKER WITH THUMB SCREW

What?

- Designed a carousel drive system for precise and repetitive motion.
- Optimized for cost-efficiency and modularity.
- Suitable for both proof of concept (PoC) and mass production.

How?

- SolidWorks** for modelling and drafting
- Stepper motor chosen for precision and cost-effectiveness.
- Timing belt & pulley system (1:3 ratio) ensures smooth motion.
- Modular stacker unit with thumbscrews for quick attachment.

Results

- Stable and precise motion control achieved.
- Scalable design from PoC (3D printing) to mass production (injection molding).
- Adjustable and cost-effective system with optimized material selection.
